THE GREAT DAY

FELIPE SUA

Cut, draw, paint and paste are just some of the few things people think about English Day, but to me this day has a bigger meaning, it is the best way to create a stronger relationship with your partners, talk with people you have never talked, and free your mind. The essence of the English Day has changed through the years. Some people say this is terrible, but a change can be good, right? I honestly can tell you that this year has been a roller coaster. But I found out

that 2016 was my best and favorite English Day ever. When the fire and the rain were at our feet we fought it, we lost some battles, but we won the war. You know, we slay.

The air and the time were against us. But you know what they say, when life gives you lemons, make lemonade, and we made a big SMOOTHIE. I can tell you that this was not an accident, it was the original plan created by the Destiny. I hated it, but when I think about it I just smile. We got in formation, and then we made so-

mething dark look bright, we changed The meaning of the black color to make the "Black Beauty".

English Day is NOT about who has more, it is about the person next to you, it is about friends, and laughs, jokes and love.

You can have a box full of diamonds, but if your hands are dirty you will ruin them. Love is the key, and friends are the treasure, and that is what we have learned this year. Every tear and smile were not in vain, they created something beautiful called PRIDE, they made more than one hundred souls were one.

So if you are reading me, raised your cup or hand, or whatever you have. And think about this, people will always talk, haters going to hate, so let them talk. We are from the same team, do not forget that, and if you do it just hug a tree, but the tree that is in your right arm, and the you will remember it, do not forget the faces and voices of your friends, and the feeling that comes along with them, they are the meaning of this, people playing with people. People loving people. We rose, and we will rise together.

Long live Luftmensch, the prom of the "BLACK BEAUTY", the fearless people with the best English guide on a prom.

Sincerely yours, the one who is hated and loved at the same time.

Long Live Luftmensch, Long live the tree, Long live love.

Origins of the friendship between humans and dogs

A new international investigation headed by Oxford University scientists, has located the parallel relationship between the humans and dogs. The origin of the friendship between humans and dogs started at the same time. In the East and West of Eurasia, it began from two different wolf populations. The experts compared genetic data from fossils; they rebuilt the evolutionary history of the dogs and discovered that the dogs were domesticated twice, no once like we thought. The origin of both domes-

tications –before the agriculture- would proceed from two separated wolf populations, now extinct.

There are a lot of genetic and archaeological facts that proves that the times and places where the first dogs were domesticated would be different, then there is not agreement about when dogs were domesticated for the first time.

To conclude the first dogs would have emerged in Europe more than 15,000 years old and at the same time in East Asia more than 12,500 years old.

The Death of Humanity at Hands of Technology

Science and technology have been in a golden age ever since the Enlightenment, and moreover so since the XIX century. These innovations in science and inventions have changed the world and made our lives as humans easier and more efficient as well as allowing our society to grow in size and complexity. Revolutions in science, medicine, transportation and energy are just a few of the areas that have benefited mankind with their progress, but few people have stopped to really look at the consequences all this technology has had not only on the world, but on ourselves as a species and a society.

Science and technological innovations are idolized nowadays, if a scientist publishes a paper on renewable energy or on a new medicine that can save lives people go crazy and praise the discovery. This ever growing idolization has led to other areas of learning and knowledge to be a bit shunned, more than anything the ones that pertain to the humanity's (law, sociology, philosophy, history, etc.). This is a problem because science is capable of advancing, discovering, creating; but science is incapable of taking a moment to think about what is right and wrong, what should or shouldn't be done, or if the goals of science and design are not the goals we need. For that we need ethics, philosophy, and the humanity's.

To demonstrate this point in a simple example, let's take connectivity. Smart phones, computers, the internet, social media; all of these are responsible for the kind of world we live in, which seems fine. We can stay connected to the people we cherish no matter how far apart we may be geographically, but this constant connectivity sometimes makes us slaves to our phones and social media such as WhatsApp,

always checking to see if our inner group of friends maybe answered our message. What we don't realize is that by always being connected to the same group of people, we deny ourselves the chance to lift our heads up and meet new people that are actually around us. Not only that, but our technological connections make our emotional connections weaker some would say. Another debate on this same discussion is that these means of communication are poorly designed, and generate distractions and making the users constantly drift from their original task.

But this may not seem so important to some people, so perhaps another example, much more drastic, is necessary. Engineers are intent on designing intelligent machines, machines that can learn on their own, and eventually, have free will and be sentient. Everybody seems ecstatic with these news, imagining a future where machines will do everyone's grunt work, laundry, errands and others. But nobody stops to think about if these sentient machines will have rights just as humans have human rights. Will they be creative? Smarter and stronger than

humans? Capable of adapting to anything? Or perhaps we will see stories such as Blade Runner, I Robot, Terminator and others come to life.

These are questions that need to be answered before they become a reality, and the limits of technological advancements need to be defined so that human relationships and society won't be affected in the future. In this forum we seek to discuss these emerging technology's that progress nonstop and could pose a threat to life as we know it (for humans and the environment alike), and determine the extent of their damage. To tackle the problem from different points of view, society, politics, environmentally, religiously and from aspect of life, and finally come to some conclusions of what courses of action could be viable. Technology is present in our everyday life, it's time we stop fooling around with it on social medias and praising every discovery as incredible and actually start to ask ourselves, is this right?

My super cat

Sasha is our super cat, she was adopted, she has lived since 2008, and she is 8 years old since when we adopted her.

A day when we went to the laboratory of a friend, we went to Sasha and she was naughty and accidentally broke some laboratory instruments, we have a very dangerous experiment and hearing instruments break, we leave alone the experiment, and later Sasha ate.

After a month she acted strange, so we decided to take her to a

specialist to look that had, he discovered that she was not normal because had a laser beam on the whiskers, could become invisible and fly.

We did not believe him then returned to the house and she started flying around the room, we were surprised, then we decided to keep and admire her powers.

After a week she started talking and said us: "I wanted to help the humanity", we left her to follow her dreams and now she is a super hero.

SUPERHEROES IN REAL LIFE

Are there superheroes in real life? That question has a wonderful answer...yes! There are superheroes like your mother for example, who takes care of you, and we can also mention our true Friends who are on our side in good times and bad times. We have several examples about real superheroes in our real life.

In my case my real superhero is my mother because she takes care of me, she helps me when I need a hand, especially in bad moments, she is smart and tender and can fix almost anything. She helps me every time.... SHE IS MY SUPERHERO AND I LOVE HER!

TV PROGRAM

TV is a good way of entertainment which has been developing through the years. There are many types of TV programs, for the youngest and for the oldest too. Also you can find many kinds of TV program for every taste. That is the reason why I am going to talk about a popular type of TV program.

The TV programs that I am going to talk about are the ones directed to children and teenagers. This type of TV is one of the most popular subject in the world because there you can see a lot of va-

riability to cover all tastes. Nowadays, TV programs also can teach values to the youngest viewers, making TV a funny way to learn.

TV can teach but also can corrupt people. If you use it in a good way you can be helped to bring up a child, or learn by yourself. But don't become into a TV addicted, TV shouldn't be the only way to entertain yourself because there is a lot of things you can do without TV, like being with family or friends, traveling, practicing a sport or whatever you like to do.

HEALTH SECTION

HOW TO STAY HEALTHY

Good health habits can allow prevent disease and improve a quality of life. The following steps will help you and live better.

- ✓ **Balanced diet:** a healthy diet is governed by include all the food-stuffs referred to in the nutritional pyramid but in the correct proportions and in sufficient quantity to maintain the nutritional needs that they perform with the daily activity.
- ✓ **Physical exercise:** general recommendations determine 30 minutes a day of physical activity, being enough to walk at a rapid pace during this time. Exercise strengthens bones, heart, lungs, tones muscles; improves vitality and helps you sleep better.
- ✓ **Hygiene:** proper hygiene prevent many health problems from infections to dental problems or dermatological. The concept of hygiene refer not only to the toilet and cleaning of the body but that also applies to the domestic environment.
- ✓ **Toxic habits:** cigarettes, alcohol and drugs have a very negative impact on health. Indirect exposure to cigarette smoke can cause lung cancer in nonsmokers it is also linked with heart diseases. Alcohol consumption changes brain functions, diseases of the liver and pancreas.

Some advice for a good health:

- ✓ Include the three main food of the day: breakfast, lunch and dinner, the three food groups:
 - Cereals and tubers that provide energy to perform daily physical and social, mental activities.
 - Leguminosas and animal food that provide protein to grow and repair body tissues.

-Fruit and vegetable which contain vitamins, minerals to maintain health.

-Water to help all processes and it is part of our body significantly.

- ✓ Sleep seven or eight hours daily.
- ✓ Do regular exercise can help you control your weight.

Let's do it.

ADVICE TO HAVE HEALTHY NAILS

Nails are very important for girls, sometimes they are broken, they have spots and they hurt. These are some advices to avoid those issues:

- ❖ If you bite your nails, you can apply a nail polish with a bitter flavor.
- ❖ If your nails are yellow, don't have them painted for a long time. You can apply a cotton with vinegar or lemon some minutes every day.

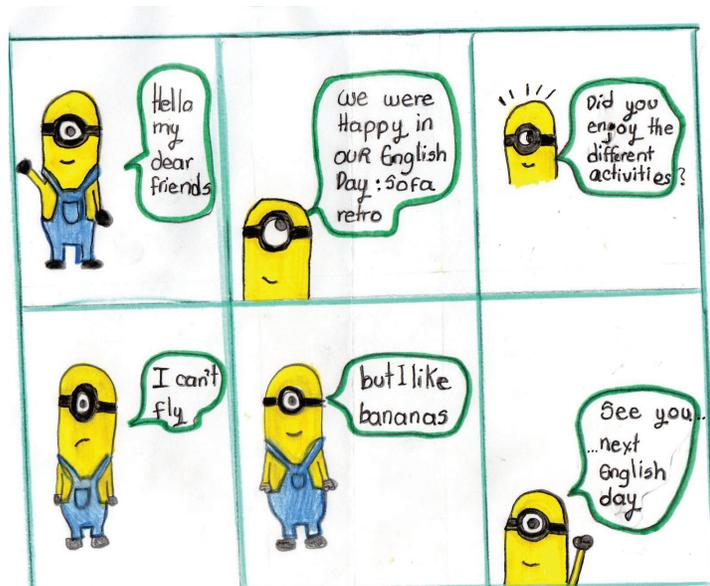

- ❖ When you remove the nail polish, you don't have to use a nail varnish remover with acetone, it could dry up them.
- ❖ If you want to have a beautiful nails, you can put a little warm oil in a bowl and put your fingers on it for ten minutes every day.
- ❖ Do you like long nails? You can drink a natural cucumber juice.
- ❖ To avoid that nails are broken

you should have a diet with a lot of milk, dry fruits and cook with sea salt.

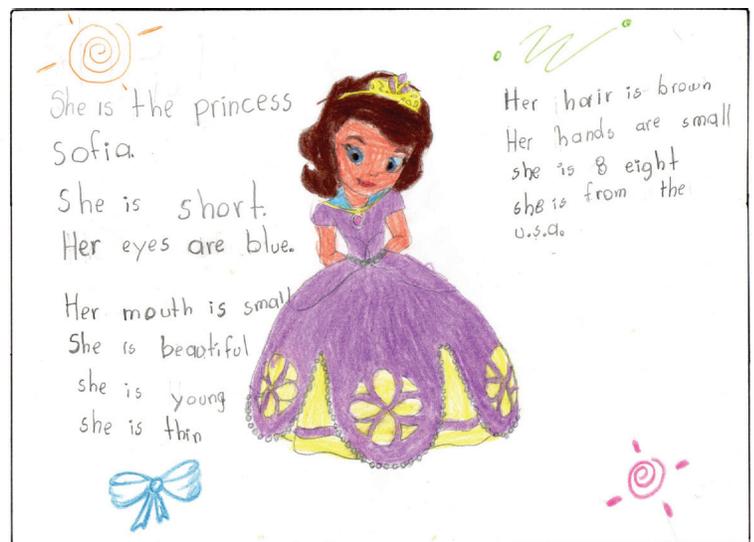

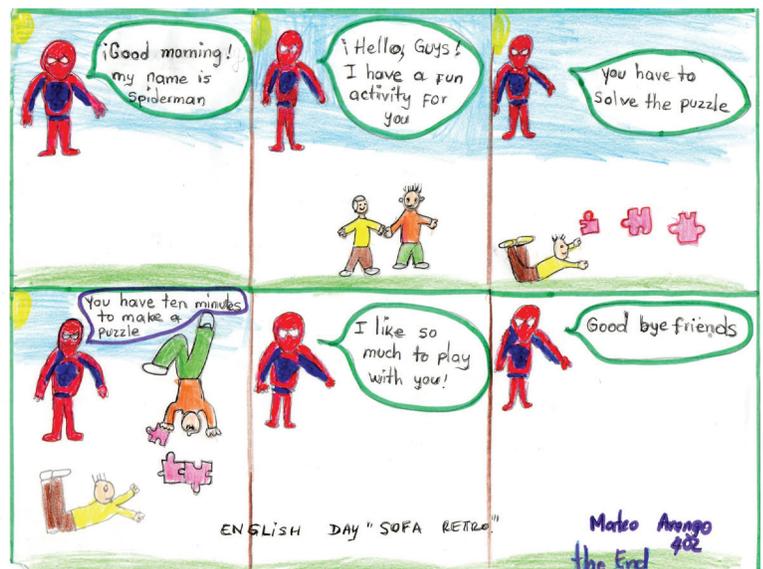

¡I expect these tips help you!
